INFOSYS SPRINGBOARD VIRTUAL INTERNSHIP

MODULE 2

Name: Shiven Pratap Singh

Project Name: HotelRevAI AI Driven Revenue Analysis for Hotels_Batch -13

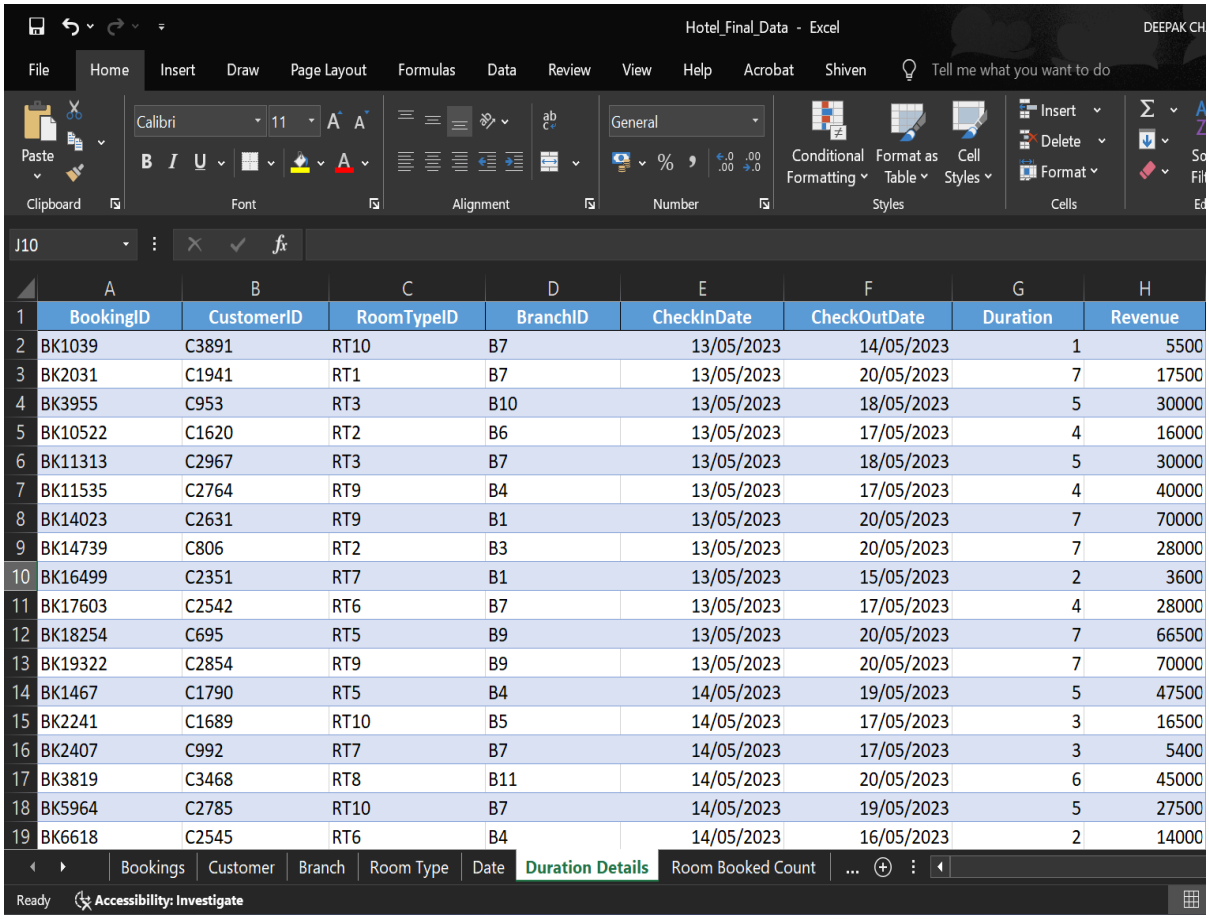
1. Objective

The goal of this module is to break down summary booking data into a daily level granular format. This allows for the analysis of daily revenue trends, occupancy rates per specific date, and the calculation of daily KPIs.

2. Creation of Excel Tables:

2.1 Creation of Duration_Details Table:

- We start with the Bookings Table containing the details of each booking.
- From Bookings Table, Create a table with columns:
  BookingID, DateID, RoomID, CustomerID, CheckInDate, CheckOutDate, NightsStayed, Total Price.
- Rename the table as Duration_Details.



BookingID	CustomerID	RoomTypeID	BranchID	CheckInDate	CheckOutDate	Duration	Revenue
BK1039	C3891	RT10	B7	13/05/2023	14/05/2023	1	5500
BK2031	C1941	RT1	B7	13/05/2023	20/05/2023	7	17500
BK3955	C953	RT3	B10	13/05/2023	18/05/2023	5	30000
BK10522	C1620	RT2	B6	13/05/2023	17/05/2023	4	16000
BK11313	C2967	RT3	B7	13/05/2023	18/05/2023	5	30000
BK11535	C2764	RT9	B4	13/05/2023	17/05/2023	4	40000
BK14023	C2631	RT9	B1	13/05/2023	20/05/2023	7	70000

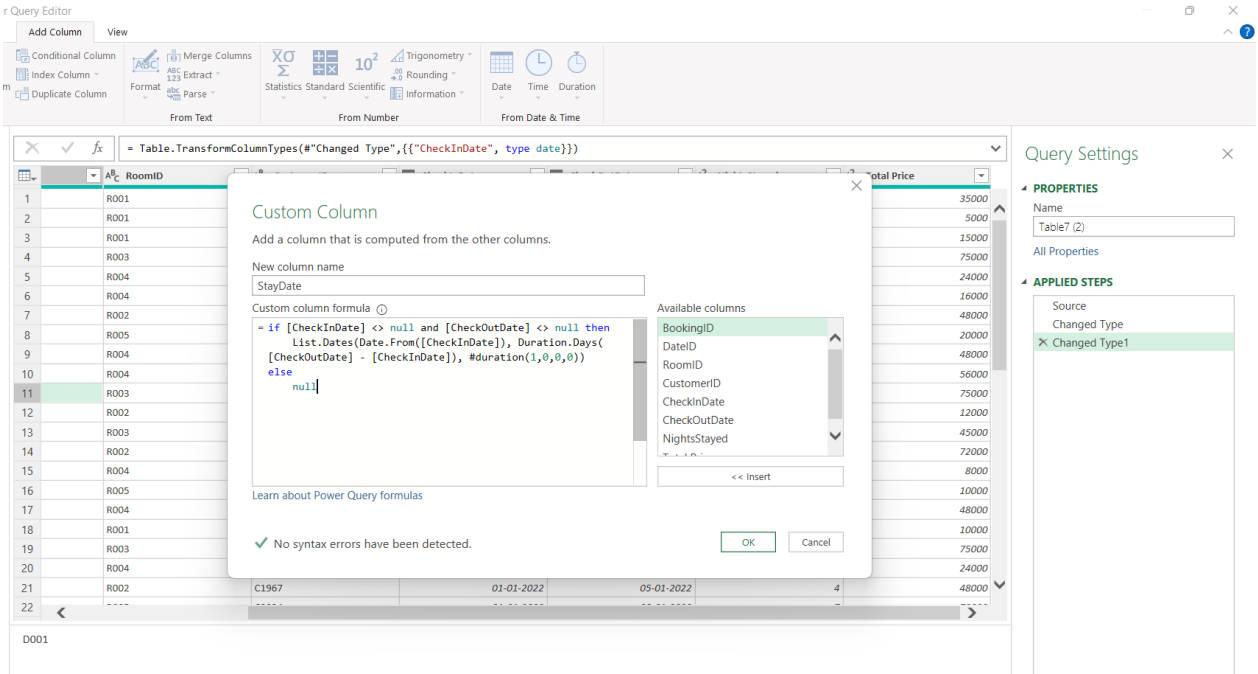
BK16499	C2351	RT7	B1	13/05/2023	15/05/2023	2	3600
BK17603	C2542	RT6	B7	13/05/2023	17/05/2023	4	28000
BK18254	C695	RT5	B9	13/05/2023	20/05/2023	7	66500
BK19322	C2854	RT9	B9	13/05/2023	20/05/2023	7	70000
BK1467	C1790	RT5	B4	14/05/2023	19/05/2023	5	47500
BK2241	C1689	RT10	B5	14/05/2023	17/05/2023	3	16500
BK2407	C992	RT7	B7	14/05/2023	17/05/2023	3	5400
BK3819	C3468	RT8	B11	14/05/2023	20/05/2023	6	45000
BK5964	C2785	RT10	B7	14/05/2023	19/05/2023	5	27500
BK6618	C2545	RT6	B4	14/05/2023	16/05/2023	2	14000

- Select the table.
- Go to Data Tab → Get & Transform Data → From Table/Range.

2.1.1 Add Custom Column

- In Power Query Editor, go to Add Column →Custom Column.
- New Column Name: StayDate
- Formula (M-Code):

```
if [CheckInDate] <> null and [CheckOutDate] <> null then
   List.Dates(Date.From([CheckInDate]), Duration.Days([CheckOutDate] -
[CheckInDate]), #duration(1,0,0,0))
else
   null
```



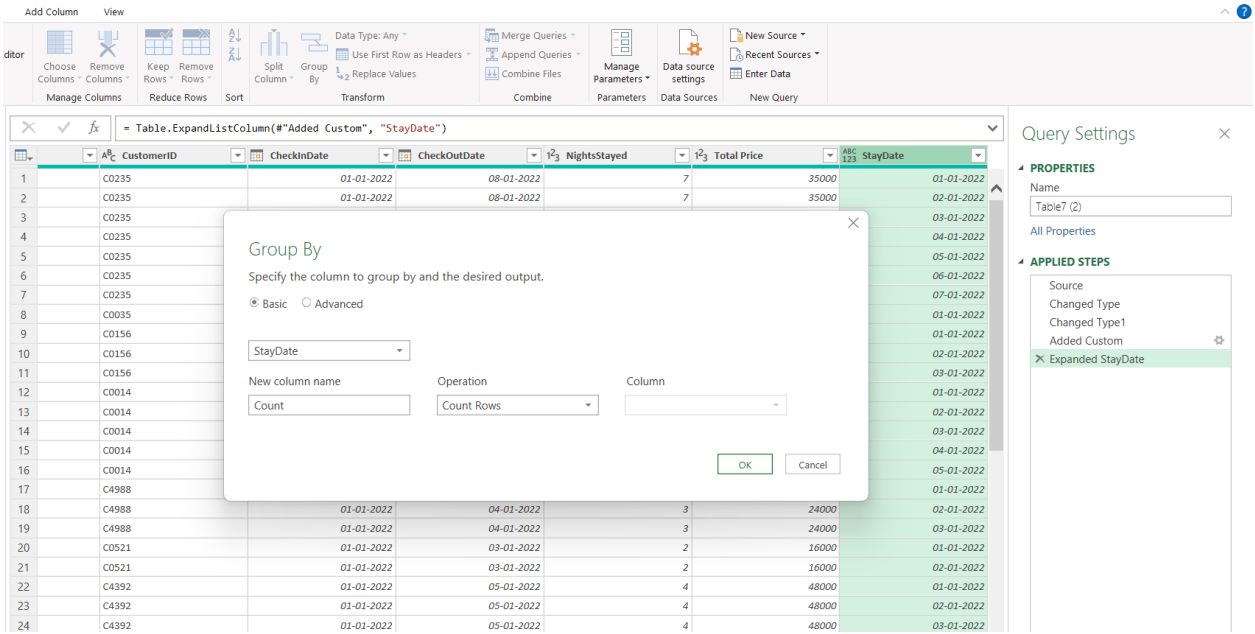
2.1.2 Expand Rows:

- Click the **Expand arrows** (two diverging arrows) next to the new StayDate column header.
- Select **"Expand to New Rows"**.
- *Result:* Each booking is now duplicated for every day the guest stayed.

2.1.3 Group By (Occupancy Count):

- Go to the **Transform** tab →**Group By**.
- **Group By:** StayDate.

- **New Column Name:** Room Booked.
- **Operation:** Count Rows.



2.1.4 Load Data:

- Go to Home →Close & Load To...
- Select New Worksheet.
- Rename the worksheet to "**Rooms Booked**".

StayDate	Room Booked
01-01-2022	36
02-01-2022	52
03-01-2022	61
04-01-2022	67

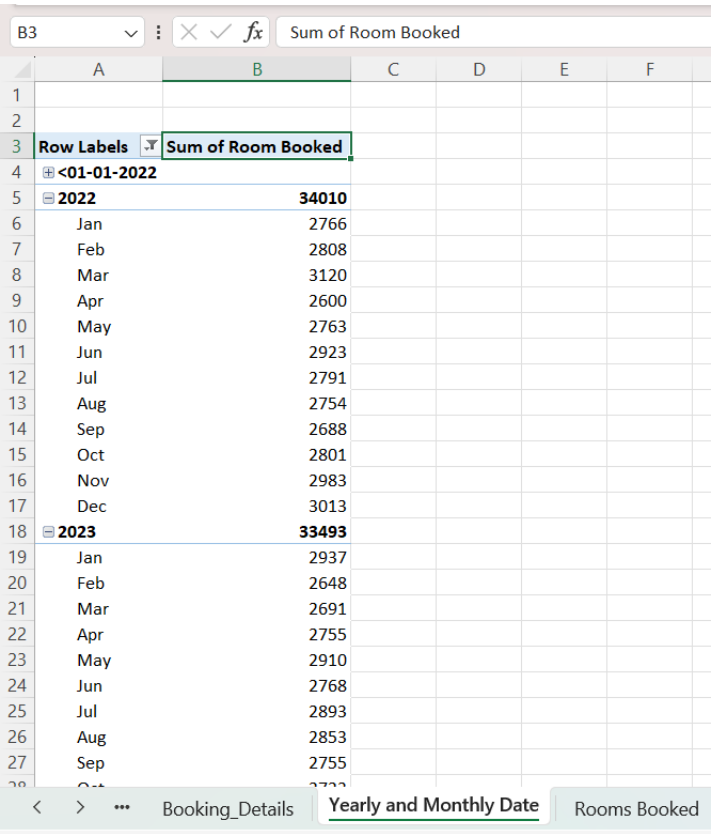
Rooms Booked | Master Data | TblRates | Sheet1 | TblBookings | Tbl_Calculation

2.2 Creating "Yearly and Monthly Date" (Pivot Table)

This sheet is used for a quick summary view of room bookings aggregated by time.

1. Insert Pivot:
   - Click anywhere inside the "Rooms Booked" table created in Step 1.
   - Go to Insert → PivotTable →New Worksheet.
2. Configure Fields:
   - Rows: Drag Years, Months, and StayDate.
   - Values: Drag Room Booked (Ensure it is set to Sum).
3. Formatting:
   - Rename the worksheet to "Yearly and Monthly Date".



Row Labels	Sum of Room Booked

2.3 Creating "Master Data" Table

1. Create Table: Create a new sheet named "Master Data".
2. Columns & Formulas:

   - Month: Enter Month Starts from 01-Jan-2022 to 31-Dec-2024.
   - Day Count =DAY(EOMONTH(A2,0))

- Room Available =B2*150
- Rooms Sold: Take Data from Yearly and Monthly Date table.
- Occupancy Rate =(D2/C2)*100

Month	Day Count	Room Available	Room Sold	Occupancy rate
01-Jan-22	31	4650	2766	59.48
01-Feb-22	28	4200	2808	66.86
01-Mar-22	31	4650	3120	67.10
01-Apr-22	30	4500	2600	57.78

01-Feb-24	29	4350	2715	62.41

Rooms Booked | Master Data | TblRates | Sheet1 | TblBookings | Tbl_Calculation

2.4 Creating Booking_Details Table

1. Create a new Sheet named “Booking_Details”.
2. Columns and Formulas:
    - StayDate and Room Booked: Copy from Rooms Booked Table.
    - Month Year =TEXT(A2, "mmm yyyy")
    - Month Start =DATE(YEAR(A2), MONTH(A2), 1)
    - Year =YEAR(A2)
    - Month =MONTH(A2)
    - Season
      =IF(OR(MONTH(A2)=12,MONTH(A2)<=2),"Winter",
      IF(MONTH(A2)<=5,"Spring",
      IF(MONTH(A2)<=8,"Summer","Autumn")))
    - Weekday =TEXT(A2,"dddd")
    - WeekNum =WEEKNUM(A2,1)
    - WeekStart =A2-WEEKDAY(A2)+1
    - YearWeek=YEAR(A1+3-WEEKDAY(A1,3)) & "-W" & TEXT(ISOWEEKNUM(A1), "00")

Duration Details | Booking_Details | Yearly and Monthly Date | Rooms Booked | Master Data | TblRates

2.5 Creating TblRates Table

Create a new sheet named TblRates with a table containing RoomID and Price as columns

	A	B	C	D
1	RoomID	Price		
2	R001	5000		
3	R002	12000		
4	R003	15000		
5	R004	8000		
6	R005	10000		
7				
8				
9				
10				

2.6 Creating TblBookings Table

- Create a new sheet.
- Create a Table with Columns BookingID, CustomerID, BranchID, RoomID, CheckInDate, CheckOutDate, NightsStayed, StayDate from Booking_Details Table
- Go to Data →Get Data →Combine Queries → Merge.

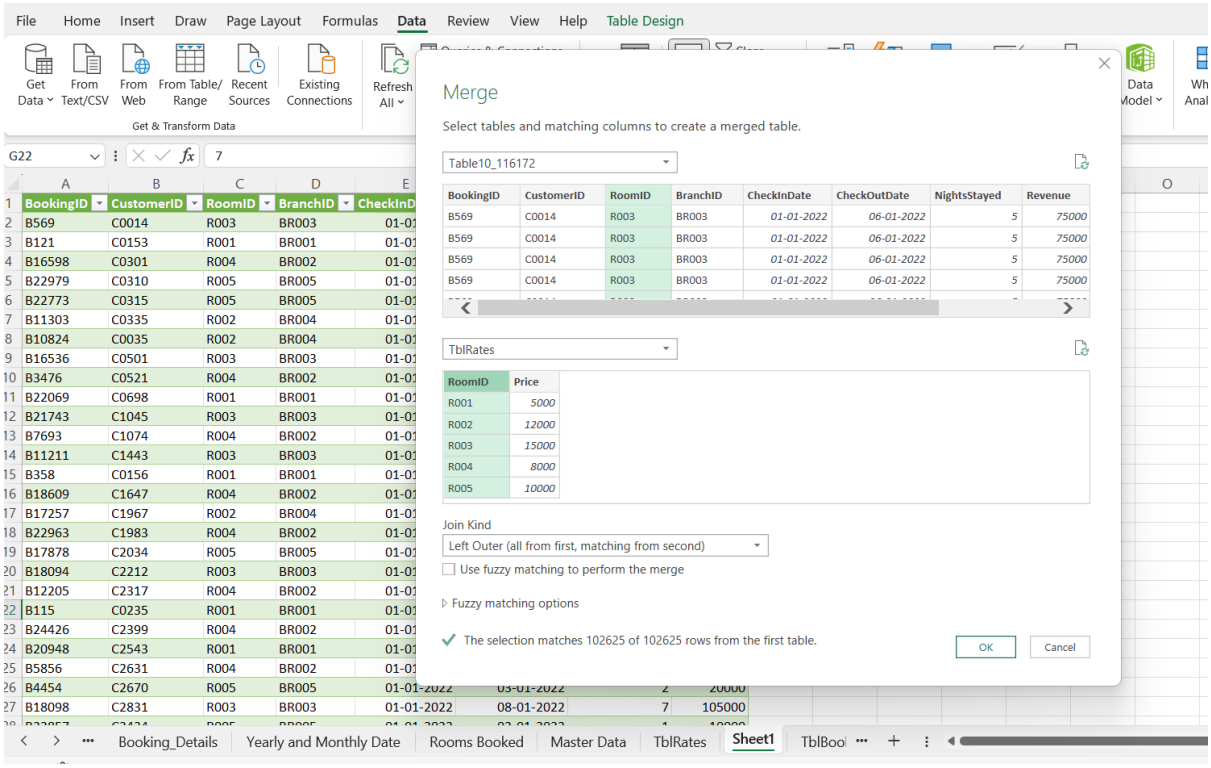
Booking_Details | Yearly and Monthly Date | Rooms Booked | Master Data | TblRates | Sheet1

- Table 1: Table10_11672
- Table 2: TblRates.
- Join Match: Select RoomID in both tables and click OK.



- In the Power Query Editor, click the expand icon on the merged TblRates column.
- Check **only** Price.
- Rename this column to **DayRevenue**.
- Close & Load To → New Table.
- Rename this sheet to "TblBookings".

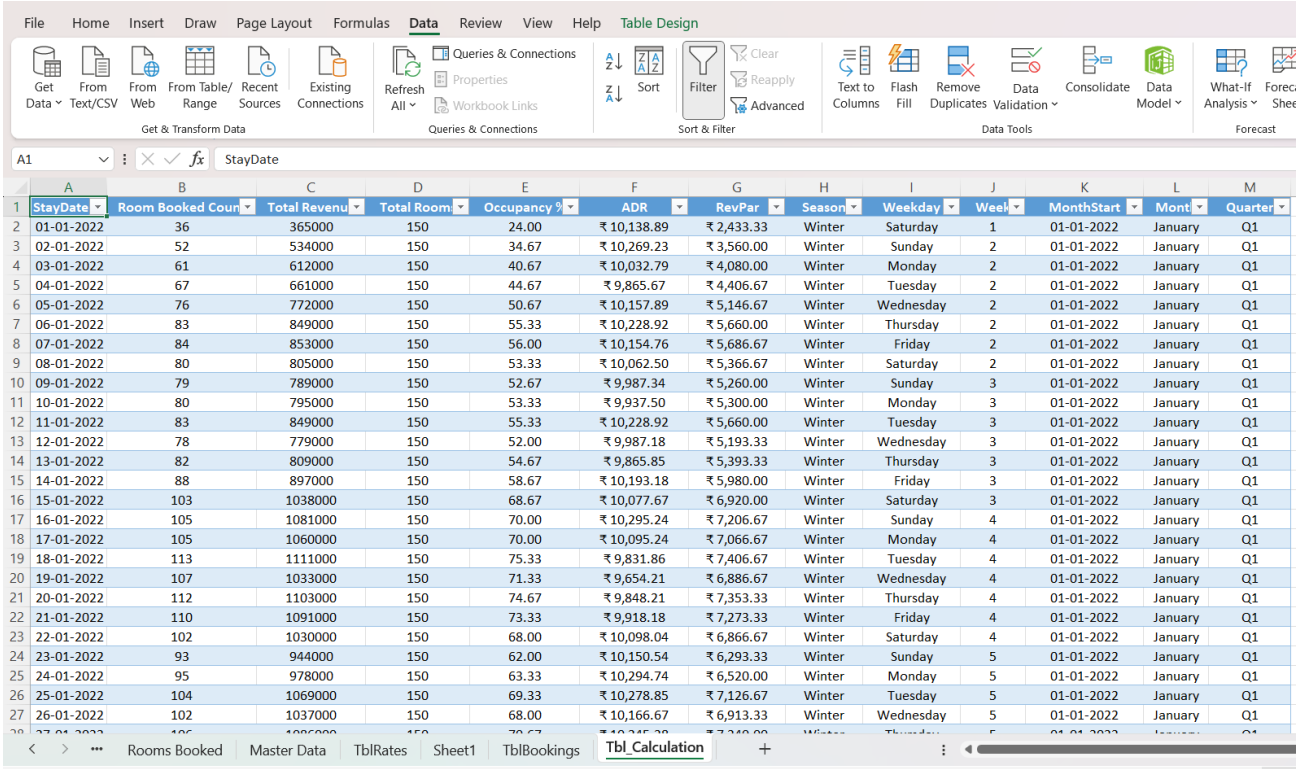
Yearly and Monthly Date | Rooms Booked | Master Data | TblRates | Sheet1 | TblBookings | Tbl_Calcula

2.7 Creating "Tbl_Calculation" (Final KPI Table)

This is the consolidated table used for final calculations using the derived data.

1. **Create Sheet:** Name it **"Tbl_Calculation"**.
2. **Columns & Formulas:**
    - StayDate and Room Booked Count : Copy from Rooms Booked Table.
    - Total Revenue =SUMIFS(TblBookings!J:J, TblBookings!I:I, Tbl_Calculation!A2)
    - Total Rooms = 150
    - Occupancy % =B2/D2*100
    - ADR =C2/B2 (DataType : Currency -> English (India))
    - RevPAR =(F2 * E2)/100
    - Season
      =IF(OR(MONTH(A2)=12,MONTH(A2)<=2),"Winter",
      IF(MONTH(A2)<=5,"Spring",
      IF(MONTH(A2)<=8,"Summer","Autumn")))

- Weekday =TEXT(A2,"dddd")
- Week =WEEKNUM(A2)
- MonthStart =DATE(YEAR(A2), MONTH(A2), 1)
- Month =TEXT(A2,"MMMM")
- Quarter ="Q" & ROUNDUP(MONTH(A2)/3, 0)



StayDate	Room Booked Coun	Total Revenu	Total Room	Occupancy %	ADR	RevPar	Season	Weekday	Week	MonthStart	Mont	Quarter

3. Power BI Data Modelling

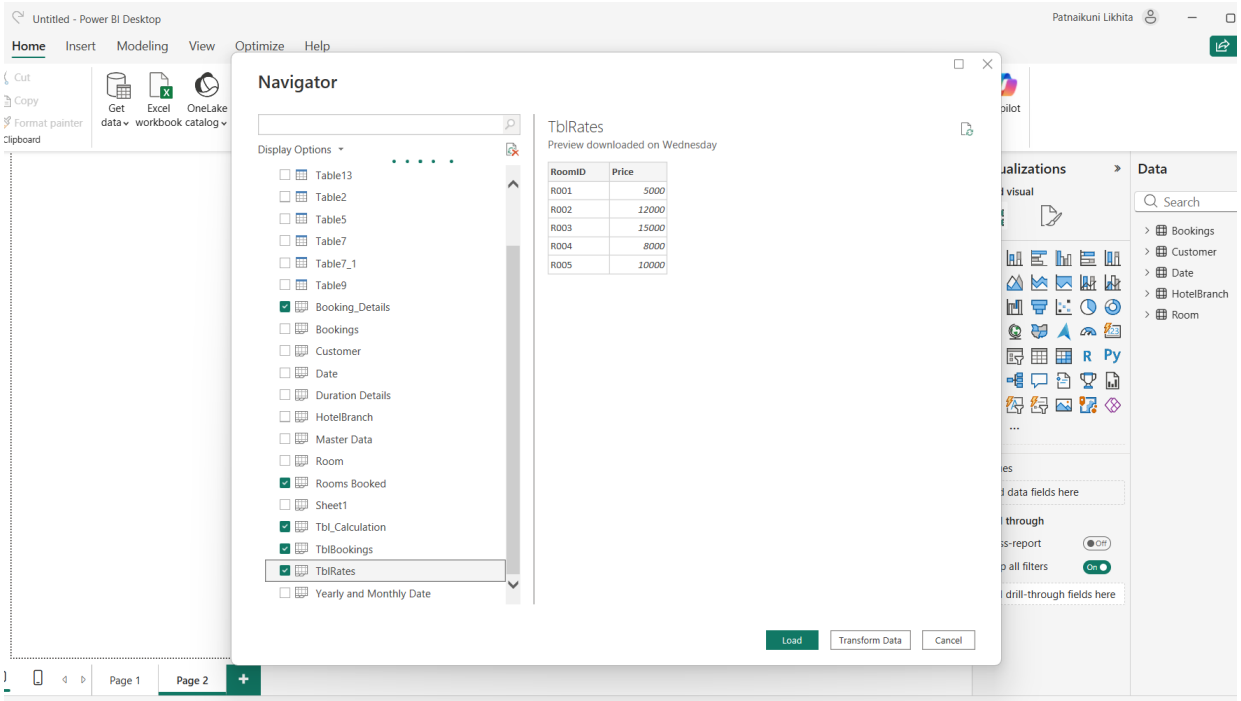
3.1 Importing Data to Power BI

Open Power BI Desktop.

- Click on Home →Get Data →Excel Workbook.
- Select the file containing your prepared tables (Booking_Details, Rooms Booked, TblRates, TblBookings, Tbl_Calculation).
- In the Navigator, select the following tables:

  Booking_Details, Rooms Booked, TblRates, TblBookings, Tbl_Calculation

- Click Load.



3.2 Enhancing Booking_Details (Calculated Columns)

1. Go to the Data View (Table icon on the left).
2. Select the Booking_Details table.
3. Click New Column
4. Formula:

   MonthStart = DATE(YEAR([StayDate]), MONTH([StayDate]), 1)

5. Create Columns in the same process for:

   - MonthYear = FORMAT([StayDate], "MMM YYYY")
   - Year = YEAR([StayDate])
   - Month = FORMAT([StayDate], "MMMM")

   - Season = SWITCH(TRUE(), MONTH([StayDate]) IN {12,1,2}, "Winter",
     MONTH([StayDate]) IN {3,4,5}, "Spring",
     MONTH([StayDate]) IN {6,7,8}, "Summer",
     MONTH([StayDate]) IN {9,10,11}, "Autumn")

   - Weekday = FORMAT([StayDate], "dddd")
   - WeekNum = WEEKNUM([StayDate].[Date])

- WeekStart = [StayDate] - WEEKDAY([StayDate].[Date]) + 1

- YearWeek = VAR SundayOfWeek = [StayDate] - WEEKDAY([StayDate], 1) VAR ISOYear = YEAR(SundayOfWeek) VAR ISOWeek = WEEKNUM(SundayOfWeek, 1) RETURN ISOYear & "-W" & FORMAT(ISOWeek, "00")

```
1 MonthYear = FORMAT([StayDate], "MMM YYYY")
```

StayDate	Room Booked	MonthStart	MonthYear	Year	Month	Season	Weekday	WeekNum	WeekStart	YearWeek

3.3 Creating the MasterData Table (DAX Calculated Table)

1. Go to the **Modeling** tab → click **New Table**.
2. Paste the following DAX formula:

```
MasterData =
VAR CalendarTable =
  ADDCOLUMNS (
    CALENDAR (DATE(2022,1,1), DATE(2024,12,31)),
    "MonthStart", EOMONTH([Date], -1) + 1,
    "Month", FORMAT(EOMONTH([Date], -1) + 1, "dd-mmm-yy"),
    "DayCount", DAY(EOMONTH([Date], 0)),
    "RoomAvailableCount", DAY(EOMONTH([Date], 0)) * 150
  )
```

```
RETURN
  ADDCOLUMNS (
    SUMMARIZE (
      CalendarTable,
      [MonthStart], [Month], [DayCount], [RoomAvailableCount]
    ),
    "RoomSoldCount",
      CALCULATE (
        SUM (Booking_Details[Room Booked]),
        TREATAS ( { [MonthStart] }, Booking_Details[MonthStart] )
      ),
    "Occupancy %",
      DIVIDE (
        CALCULATE (
          SUM (Booking_Details[Room Booked]),
          TREATAS ( { [MonthStart] }, Booking_Details[MonthStart] )
        ),
        [RoomAvailableCount],
        0
      ) * 100
  )
```

3. Right-click on the **MasterData** table and select New Column
4. Formula:

```
TotalRevenue = CALCULATE(
    SUM(Bookings[Revenue]),
    FILTER(Bookings, Bookings[MonthStart] = MasterData[MonthStart])
)
```

Total Revenue represents the gross income generated strictly from room bookings for the selected month.

5. Again, Click on New Column
6. Formula:

```
ADR = DIVIDE(
    [TotalRevenue],
     MasterData[RoomSoldCount]
 )
```

Average Daily Rate (ADR) represents the average price paid for an **occupied** room.

- **Formula:** Total Revenue / Total Rooms Sold
- **Insight:** Tells you how expensive your rooms are.
  - *Scenario:* If Revenue is high but ADR is low, you are selling many cheap rooms (Volume strategy).
  - *Scenario:* If ADR is high, you are selling premium rooms.

7. Click on New Column
8. Formula:

```
RevPAR = [ADR] * DIVIDE(MasterData[Occupancy %], 100)
```

RevPar represents the revenue generated per room in the hotel, regardless of whether it was occupied or empty.

- **Formula:** ADR * Occupancy %
- **Insight:** This is the most important metric**.** It balances price and occupancy.
  - *Why?* A hotel selling 1 room for $1000 (High ADR, Low Occupancy) might make less money than a hotel selling 100 rooms for $50 (Low ADR, High Occupancy). RevPAR reveals the true efficiency.

9. Click on New Measure and create the following measures:
   DAX MEASURES:

- **MADR** =

```
DIVIDE(
    SUM(Bookings[Revenue]),
    SUM(Bookings[RoomNightsSold]))
```

- **MRevPAR** =

```
DIVIDE(
    SUM(Bookings[Revenue]),
    SUM(MasterData[RoomAvailableCount]))
```

- **MOccupancy % =**

```
DIVIDE(
    SUM(Bookings[RoomNightsSold]),
    SUM(MasterData[RoomAvailableCount]),
    0
) * 100
```

- **MonthlyADR =**

```
CALCULATE(
    [MADR],
    ALLEXCEPT(MasterData, MasterData[MonthStart])
)
```

- **MRevPAR =**

```
DIVIDE(
    SUM(Bookings[Revenue]),
    SUM(MasterData[RoomAvailableCount]))
```

```
1 MRevPAR = DIVIDE(
```

MonthStart	Month	DayCount	RoomAvailableCount	RoomSoldCount	Occupancy %	TotalRevenue	ADR	RevPAR

3.4 Enhancing Tbl_Calculation table

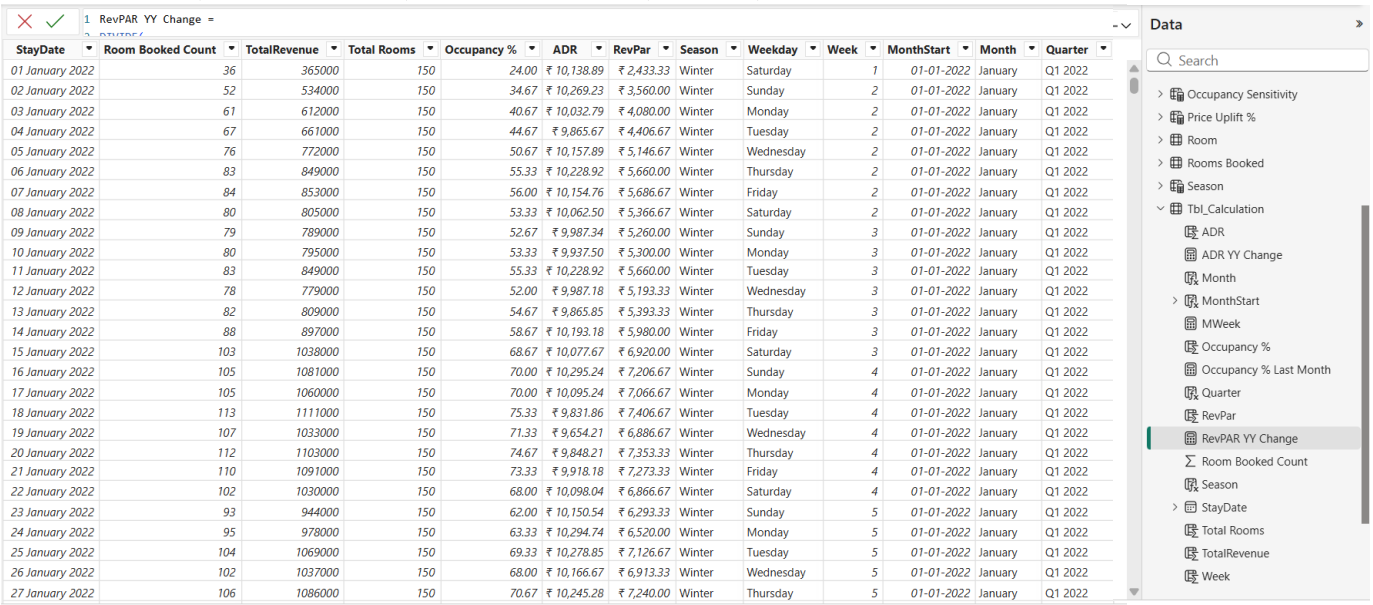
1. Go to the Modeling tab → click New Measure.
2. Create the following measures:

```
ADR YY Change =
DIVIDE(
    [ADR] - CALCULATE([ADR], SAMEPERIODLASTYEAR('tbl_Calculation'[StayDate])),
    CALCULATE([ADR], SAMEPERIODLASTYEAR('tbl_Calculation'[StayDate].[Date]))
)

MWeek = WEEKNUM(SELECTEDVALUE(tbl_Calculation[StayDate]), 2)

Occupancy % Last Month = CALCULATE([MOccupancy %],
PREVIOUSMONTH(tbl_Calculation[StayDate]))

RevPAR YY Change =
DIVIDE(
    [RevPAR] - CALCULATE([RevPAR], SAMEPERIODLASTYEAR(tbl_Calculation[StayDate])),
    CALCULATE([RevPAR], SAMEPERIODLASTYEAR(tbl_Calculation[StayDate]))
)
```



1 RevPAR YY Change =

StayDate	Room Booked Count	TotalRevenue	Total Rooms	Occupancy %	ADR	RevPar	Season	Weekday	Week	MonthStart	Month	Quarter
01 January 2022	36	365000	150	24.00	₹ 10,138.89	₹ 2,433.33	Winter	Saturday	1	01-01-2022	January	Q1 2022

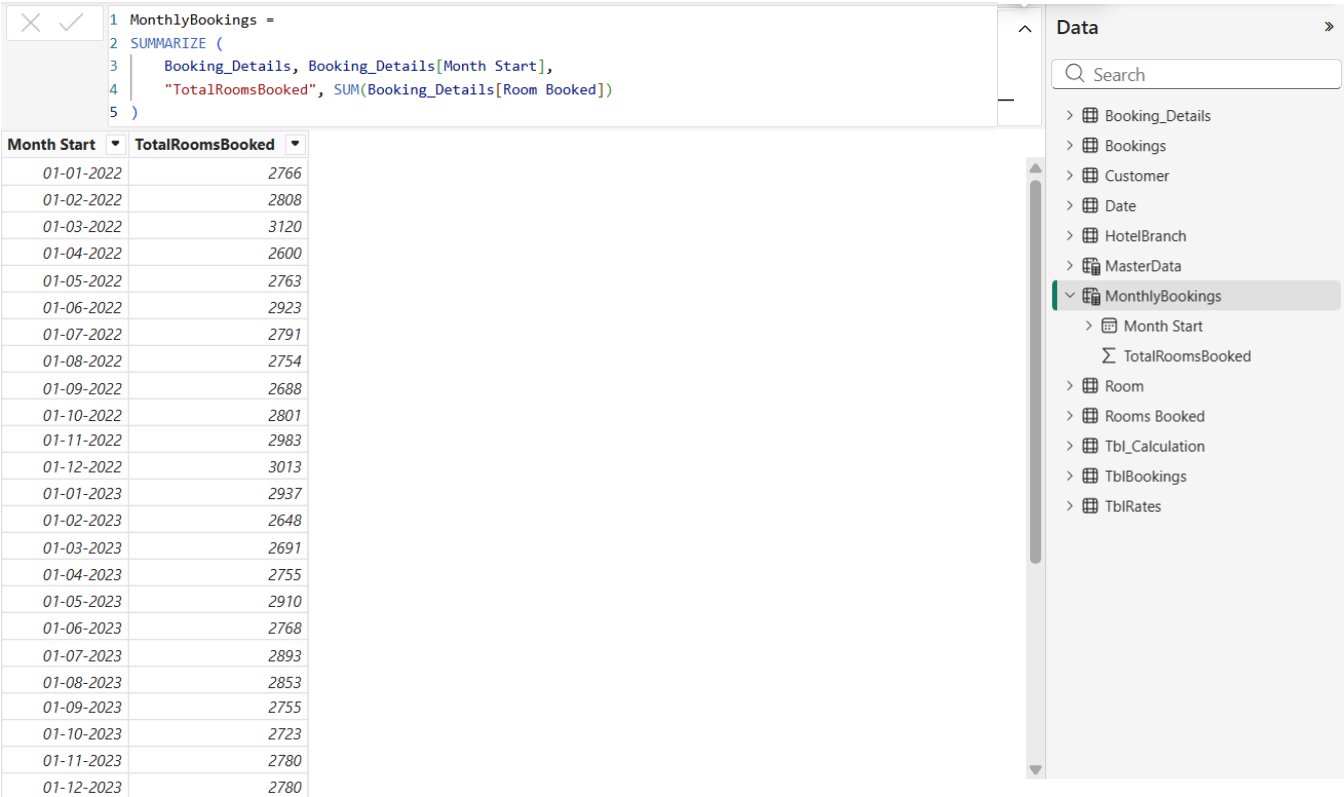
3.5 Creation of Monthly Bookings Table

1. Go to the Modeling tab → click New Table.
2. Formula:

```
MonthlyBookings =
SUMMARIZE (
    Booking_Details,
    Booking_Details[MonthStart],
    "TotalRoomsBooked", SUM(Booking_Details[Room Booked])
)
```



Month Start	TotalRoomsBooked
01-01-2022	2766
01-02-2022	2808
01-03-2022	3120
01-04-2022	2600
01-05-2022	2763
01-06-2022	2923
01-07-2022	2791
01-08-2022	2754

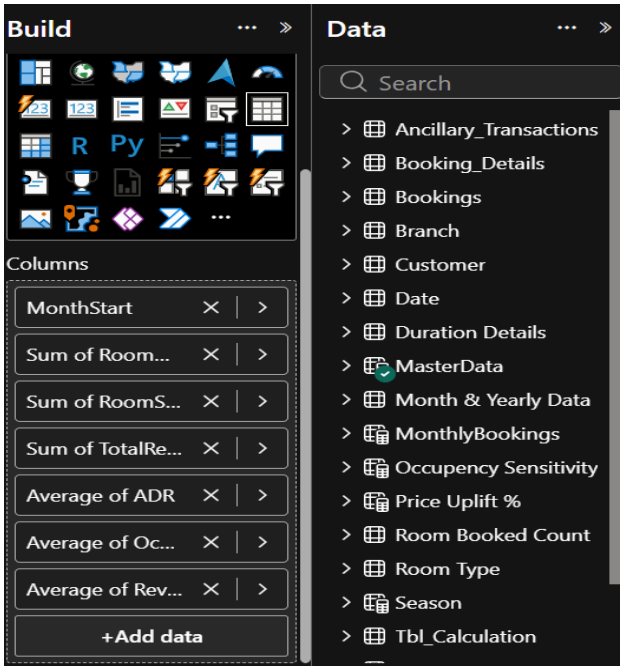
4. PowerBI Visuals:

Page 2: Monthly Trends

Visual 1: Summary Table

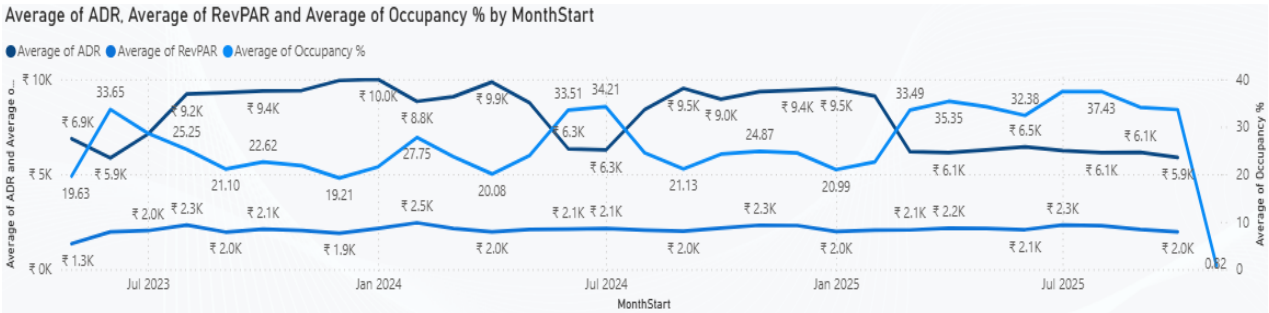
1. Select Visual: Click the Table icon.
2. Add Columns: Drag the following fields in this order:
    - MonthStart
    - RoomAvailableCount (Set to Sum)
    - RoomSoldCount (Set to Sum)
    - TotalRevenue (Set to Sum)
    - ADR (Set to Average)
    - Occupancy % (Set to Average)
    - RevPAR (Set to Average)

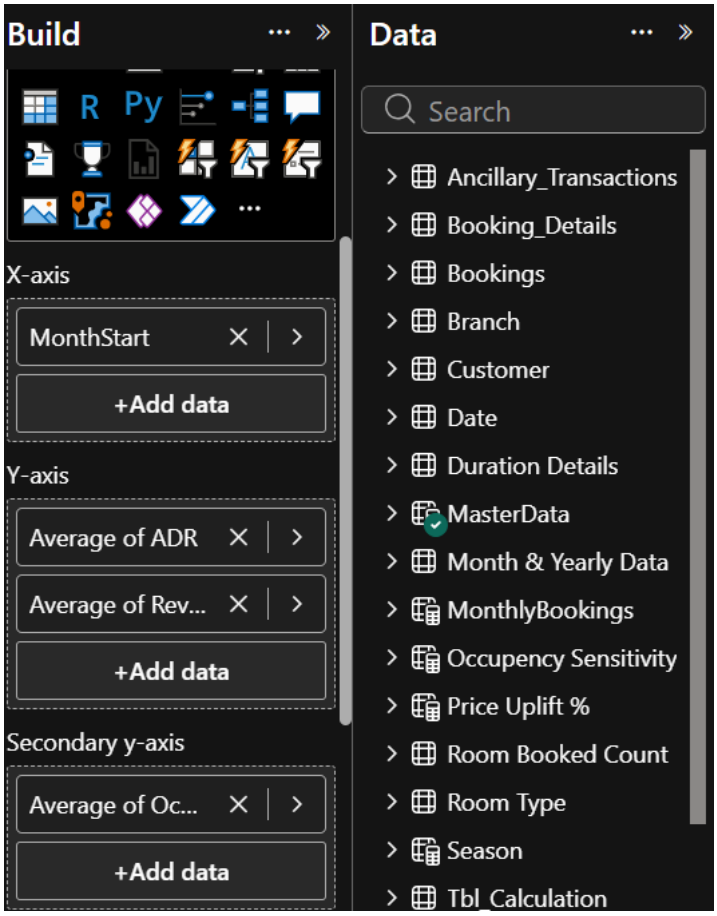
MonthStart	Sum of RoomAvailableCount	Sum of RoomSoldCount	Sum of TotalRevenue	Average of ADR	Average of Occupancy %	Average of RevPAR
01 August 2025	8060	3017	18,520,400	₹ 6,138.68	37.43	₹ 2,297.82
01 July 2025	8060	3016	18,829,100	₹ 6,243.07	37.42	₹ 2,336.12
01 April 2025	7800	2757	16,906,200	₹ 6,132.10	35.35	₹ 2,167.46
01 May 2025	8060	2758	17,342,000	₹ 6,287.89	34.22	₹ 2,151.61
01 July 2024	8060	2757	17,311,500	₹ 6,279.11	34.21	₹ 2,147.83
01 September 2025	7800	2659	16,351,800	₹ 6,149.61	34.09	₹ 2,096.38
01 June 2023	7800	2625	15,373,400	₹ 5,856.53	33.65	₹ 1,970.95
01 October 2025	8060	2709	15,949,400	₹ 5,887.56	33.61	₹ 1,978.83
01 June 2024	7800	2614	16,566,800	₹ 6,337.72	33.51	₹ 2,123.95
01 March 2025	8060	2699	16,711,200	₹ 6,191.63	33.49	₹ 2,073.35
Total	**245700**	**64913**	**499,175,300**	**₹ 7,999.25**	**26.40**	**₹ 2,098.67**



Visual 2: Line Chart

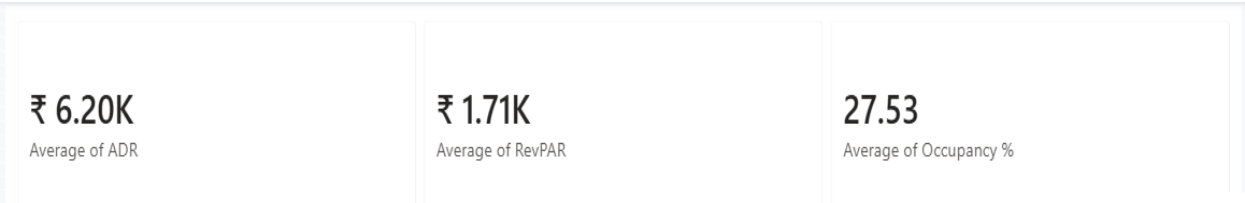
1. Select Visual: Click the Line Chart icon.
2. X-Axis: Drag MonthStart from the MasterData table.
3. Y-Axis: Drag the following three fields:
    - ADR (Set to Average)
    - RevPAR (Set to Average)
4. Secondary Y-Axis: Occupancy % (Set to Average)

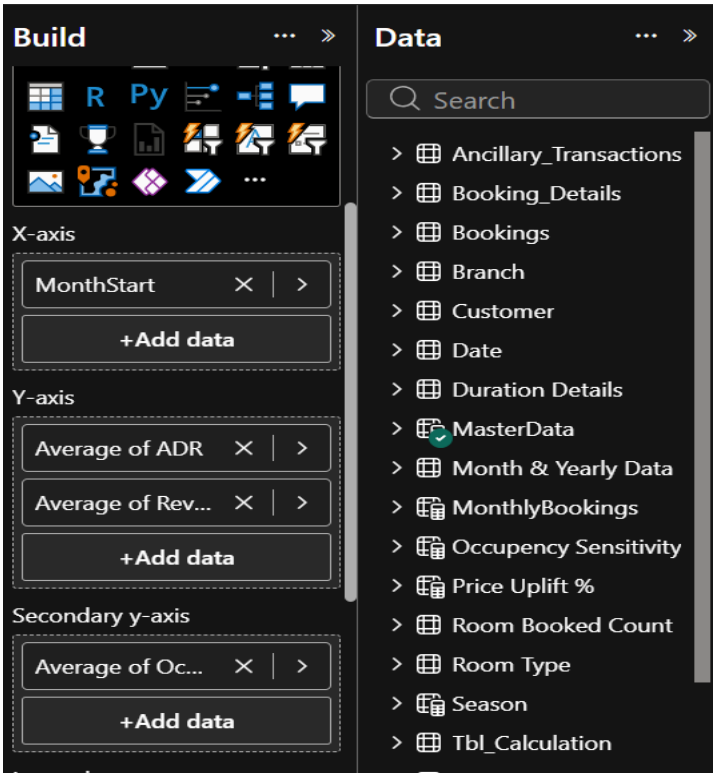


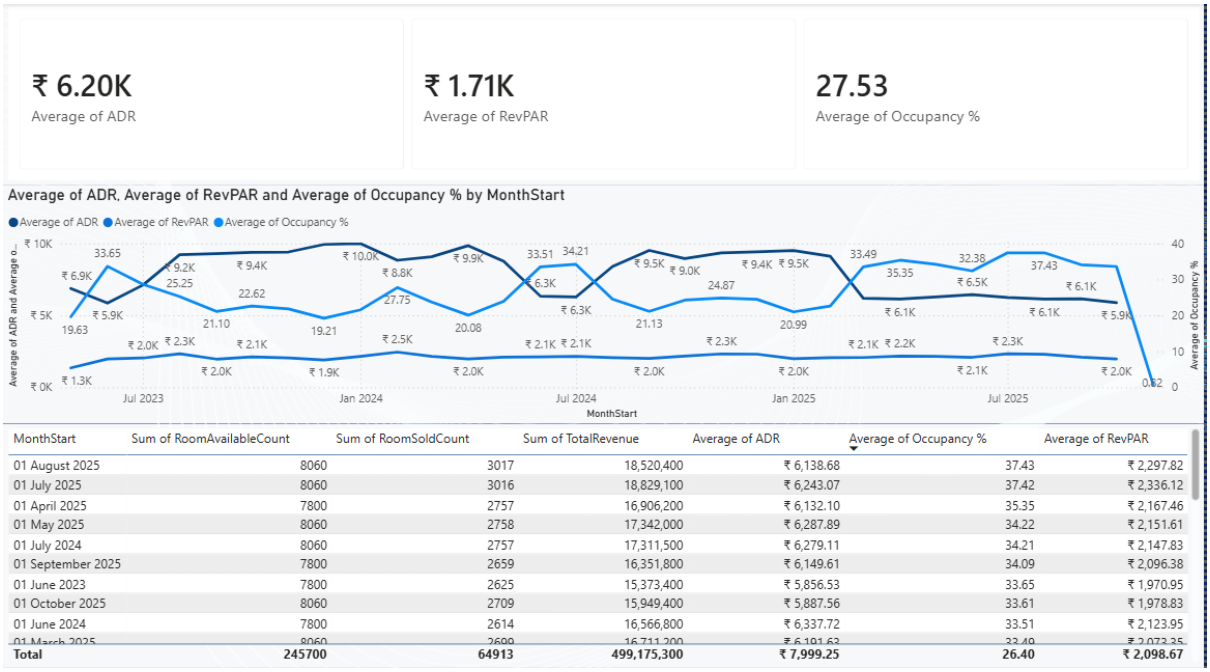


Visual 3: KPI Cards

1. Select Visual: Click the Card visual icon (looks like 123).
2. Card 1 (ADR):
    - Drag ADR from Tbl_Calculation (or your Measure table) to Fields.
    - Ensure aggregation is set to Average (Click dropdown arrow > Average).
    - Format: General > Title > "Average of ADR". Callout Value > Display units > Auto (shows ₹10.00K).
3. Card 2 (RevPAR):
    - Copy/Paste Card 1.
    - Replace field with RevPAR. Set aggregation to Average.
4. Card 3 (Occupancy):
    - Copy/Paste Card 1.
    - Replace field with Occupancy %. Set aggregation to Average.







MonthStart	Sum of RoomAvailableCount	Sum of RoomSoldCount	Sum of TotalRevenue	Average of ADR	Average of Occupancy %	Average of RevPAR
01 August 2025	8060	3017	18,520,400	₹ 6,138.68	37.43	₹ 2,297.82
01 July 2025	8060	3016	18,829,100	₹ 6,243.07	37.42	₹ 2,336.12
01 April 2025	7800	2757	16,906,200	₹ 6,132.10	35.35	₹ 2,167.46

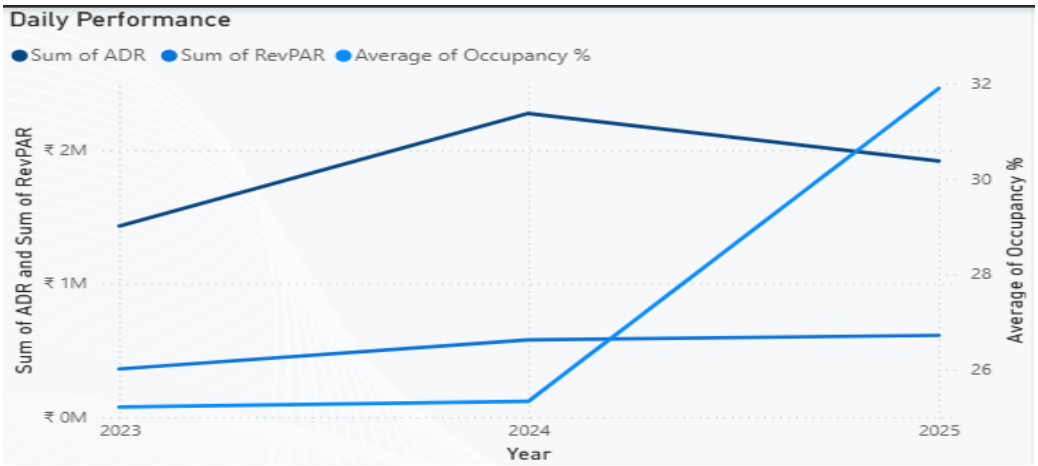
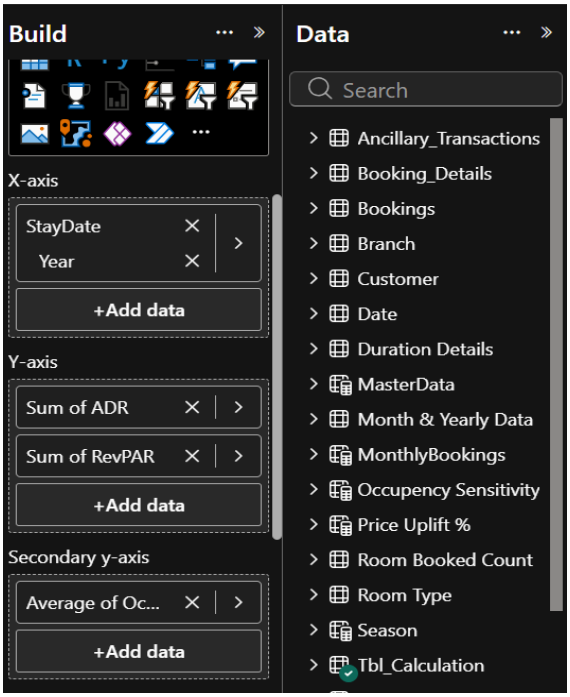
Total	**245700**	**64913**	**499,175,300**	**₹ 7,999.25**	**26.40**	**₹ 2,098.67**

Page 3: Time Period Analysis (Year, Week, Season)

Visual 4: Daily Performance

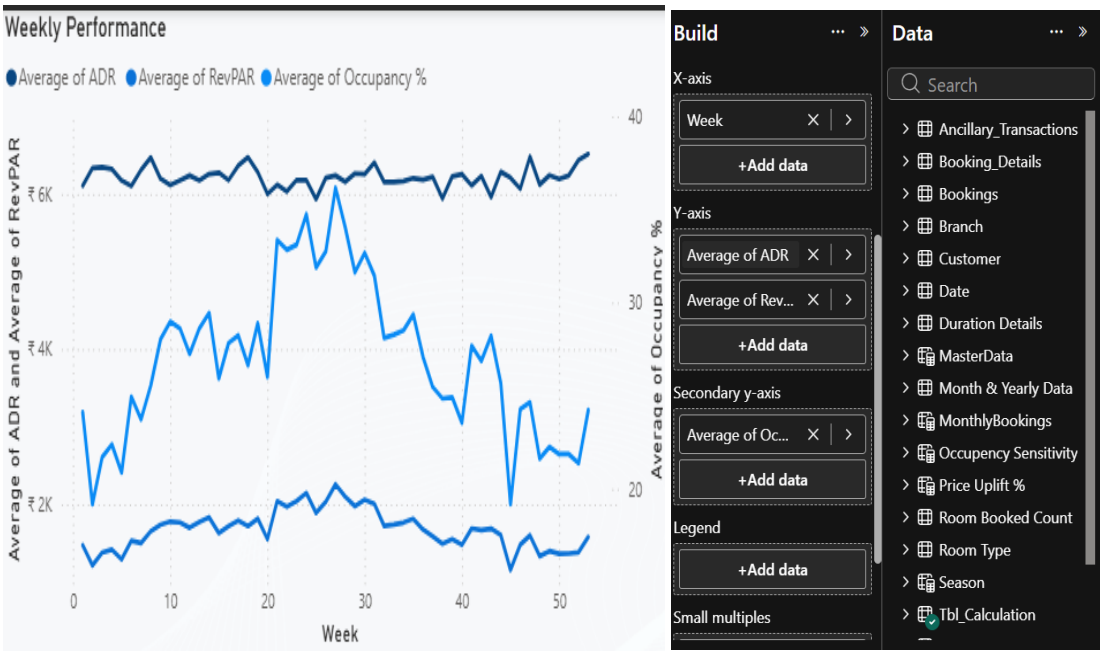
1. Select Visual: Click the Line Chart icon.
2. X-Axis: Drag Year from MasterData.
3. Y-Axis (Left Scale):
   - Drag ADR (Set to Sum)
   - Drag RevPAR (Set to Sum).
4. Secondary Y-Axis (Right Scale):
   - Drag Occupancy % (Set to Average).
5. Go to Format (Paintbrush Icon) -> General -> Title -> Enter “Daily Performance”





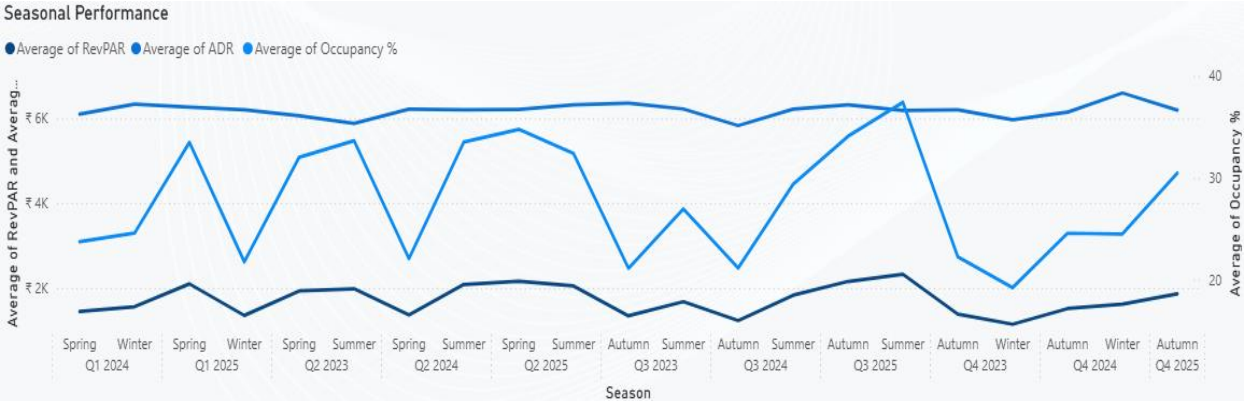
Visual 5: Weekly Performance

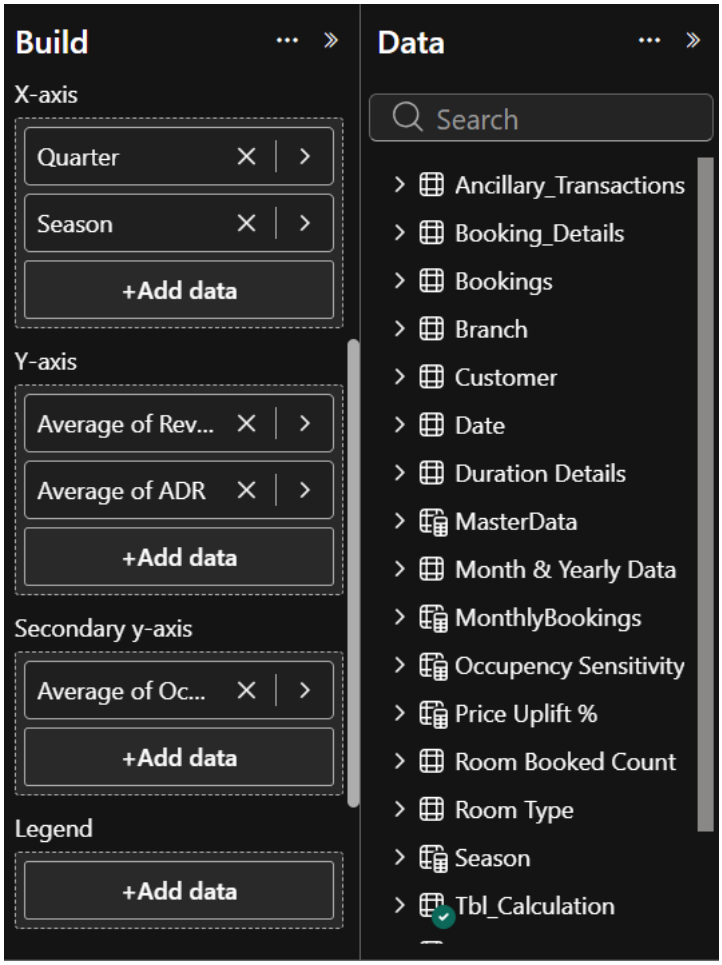
1. Select Visual: Click the Line Chart icon.
2. X-Axis: Drag Week from MasterData.
3. Y-Axis: Drag ADR (Average) and RevPAR (Sum).
4. Secondary Y-Axis: Drag Occupancy % (Average).

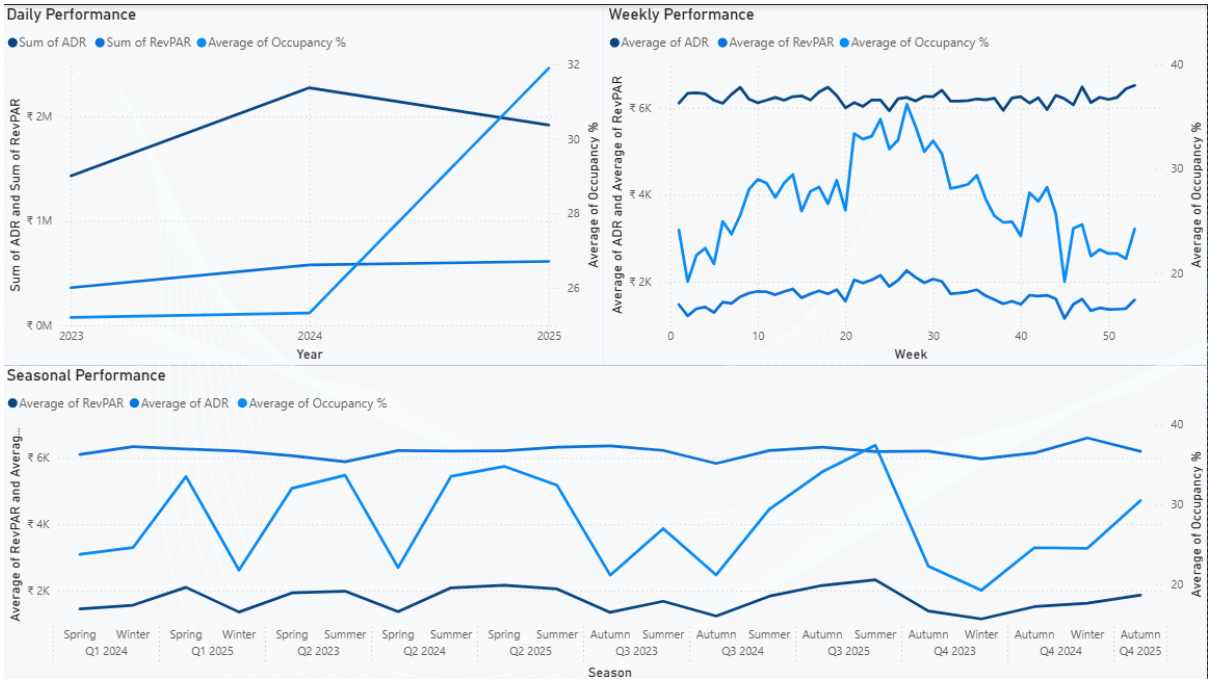


Visual 6: Seasonal Performance

1. Select Visual: Click the Line Chart icon.
2. X-Axis: Create a hierarchy or drag fields in this order:
    - StayDate (Year, Quarter from Tbl_Calculation)
    - Season (from Tbl_Calculation)
3. Y-Axis: Drag ADR and RevPAR (Averages from MasterData).
4. Secondary Y-Axis: Drag Occupancy % from MasterData (Average).







Page 4: Drill Down Table

Visual 7: Table

1. Select Visual: Click the Table icon
2. Rows (The Hierarchy): Drag field into the "Rows"
    - MonthStart from MasterData (Year, Quarter, Month, Day)
3. Values: Drag the metrics you want to measure:
    - ADR (Select Average)
    - Occupancy % (Select Average)
    - RevPAR (Select Average)
4. Formatting:
    - Go to Specific Column formatting to apply Currency (₹) to ADR/RevPAR.

Year	Quarter	Month	Day	Average of ADR	Average of Occupancy %	Average of RevPAR
2023	Qtr 2	May	1	₹ 6,870.42	19.63	₹ 1,348.51

2024	Qtr 1	March	1	₹ 9,078.19	23.72	₹ 2,153.54
2024	Qtr 2	April	1	₹ 9,850.32	20.08	₹ 1,977.64
Total				**₹ 7,999.25**	**26.40**	**₹ 2,098.67**

5. Insights

Key Performance Indicator (KPI) Analysis

Based on the aggregated data in the KPI Cards and Summary Tables:

- Premium Market Positioning (ADR):
  - The Average Daily Rate (ADR) stands at approximately ₹10,000 (₹9,996.68).
  - Insight: This pricing structure confirms the hotel operates in the Premium/Luxury segment. The hotel commands a high price point per transaction.
- Operational Efficiency (Occupancy %):
  - The Average Occupancy Rate is 62%.
  - Insight: While the hotel charges a premium price, nearly 38% of inventory remains unsold on average.
- Revenue Reality (RevPAR):
  - The Revenue Per Available Room (RevPAR) is ₹6,232.
  - Insight: There is a distinct gap between the potential earnings (ADR: ₹10K) and actual earnings per room (RevPAR: ₹6.2K). This gap represents the "Revenue Opportunity" lost due to vacancies.

6. Conclusion

Business Conclusion:

The data reveals a hotel chain with strong pricing power (**High ADR**) but inconsistent demand (**Moderate Occupancy**).
